“DELIVERING EXCEPTIONAL HEALTHCARE”
Diabetes describes a condition of high blood sugar, in which the body cannot make proper use of carbohydrate in food because the pancreas does not make enough insulin, or can’t make insulin at all.

As people with diabetes have problems with their insulin, it is necessary for them to take steps to manage their high blood sugar. This can be done through a healthy lifestyle and treatment.

Endocrinology focuses primarily on the endocrine organs, or those organs that may cause a "hormone imbalance". These organs include the pituitary, thyroid, adrenals, ovaries, testes and pancreas. This can be a complicated specialty. There are many glands and hormones in the body, each with their own jobs to do. It is a delicate chemical balance that keeps our bodies running smoothly with very little effort on our part. When the balance is upset, serious diseases and conditions can develop.

Diabetes & Endocrine Team can help you manage your diabetes.

**Basic Diabetes Control Tips**

- Keep normal body weight
- Exercise
- Healthful diet
- Stop smoking
The Diabetes and Endocrine Centre

Diabetes and Endocrine service at University Hospital Sharjah is dedicated to educating our patients while providing compassionate and high quality medical care which is based on contemporary treatment guidelines and solid medical science.

Our focus is the care and treatment of patients with a wide range of endocrine disorders, including diabetes. We will partner with you, your family and your primary care provider to manage your treatment in all areas of diabetes and endocrinology. Our goals are to provide patients with excellent patient care utilizing a multiple disciplinary team approach and to offer evidence-based treatment options.

Our team of endocrinology experts—board-certified endocrinologist, certified diabetes educators and registered dietitians—provide expert advice on diagnosis and management of diabetes, thyroid disease and a variety of other hormonal conditions.

Diabetes is a condition that affects millions of people. Whether you are new to diabetes or have lived with this condition for years, our specially trained diabetes educators can provide the tools, education and support you need to help you lead a healthier life.

Our Services

The endocrine system comprises the thyroid, parathyroid, pancreas, ovaries, testes, adrenal, pituitary, and hypothalamus. These glands produce the hormones that control various activities of the body, such as reproduction, metabolism, growth, and development. The way the body responds to the environment is also controlled by hormones, which help to regulate the energy and nutrition the body receives to make it function properly.
